REQUIREMENT TABLE:

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall generate weekly meal plans strictly adhering to user macro-nutrient constraints and allergen exclusion lists.	High	Pass: Generated menu contains zero excluded allergen ingredients. Fail: An excluded allergen, such as peanuts for a peanut-allergic profile, is included.	Ensures generated meal plans comply with the subscriber's dietary constraints.
FR-002	Functional	The system shall allow the subscriber to provide and maintain dietary constraints, including allergies, diabetic limits, and calorie goals.	High	Pass: When the subscriber saves a dietary constraint, the system stores it and displays it in the subscriber's dietary profile. Fail: A saved constraint is missing or displayed incorrectly.	Provides the information required to generate personalized meal plans.
FR-003	Functional	The system shall allow the dietitian to review and manage the subscriber's dietary information used	High	Pass: The dietitian can view the subscriber's recorded dietary constraints and update them when required. Fail: The dietitian cannot view or update the	Allows the dietitian to manage the dietary information used to personalize meal plans.

		for meal-plan generation.		recorded dietary information.	
FR-004	Functional	The system shall allow the subscriber to pause, skip, or reschedule a meal delivery before dispatch.	High	Pass: A valid pause, skip, or reschedule request made at least 12 hours before dispatch is recorded successfully. Fail: The requested schedule modification is not recorded.	Supports the subscription schedule modification functionality specified in the problem statement.
FR-005	Functional	The system shall track the fulfillment status of the subscriber's daily meal deliveries.	High	Pass: The system records and displays the fulfillment status for each scheduled daily delivery. Fail: A scheduled delivery has no recorded fulfillment status.	Enables the service to track a daily delivery fulfillment.
NFR-001	Non-Functional — Performance & Security	The subscription engine must support schedule modifications (pause, skip, reschedule) up to 12 hours before dispatch.	High	Pass: Benchmarking tests confirm the required performance and security standards under simulated peak load. Fail: The system does not meet the required performance or security standards under simulated peak load.	Ensures schedule modifications can be handled reliably before the dispatch deadline.
NFR-002	Non-Functional — Performance	The system shall generate the subscriber's	Medium	Pass: The weekly meal plan is generated and	Ensures the meal-plan generation
